

Association between contraceptive use and PrEP uptake and continuation in adolescent girls and young women in Cape Town, South Africa.

Elzette Rousseau, Jared M. Baeten, Jennifer Morton, Rachel Johnson, Connie L. Celum, & Linda-Gail Bekker

Interest 2019

PrEP delivery for Young Women

- Adolescent girls and young women (AGYW) experience 1000 new HIV infections every day
- PrEP allows users to take control of their own health without dependence on sexual partners for HIV prevention
- A call for PrEP to be integrated into reproductive health services
- Understanding AGYW patterns of use is critical for scale up of PrEP programmes

Prophylaxis (PrEP) for HIV Prevention

POWER PrEP Delivery Locations

Objective

Develop cost-effective and scalable models for implementation of ARV-based HIV prevention products for young women in Cape Town and Johannesburg (South Africa) and Kisumu (Kenya).

PrEP delivery from mobile clinic, Cape Town

POWER and PrEP use

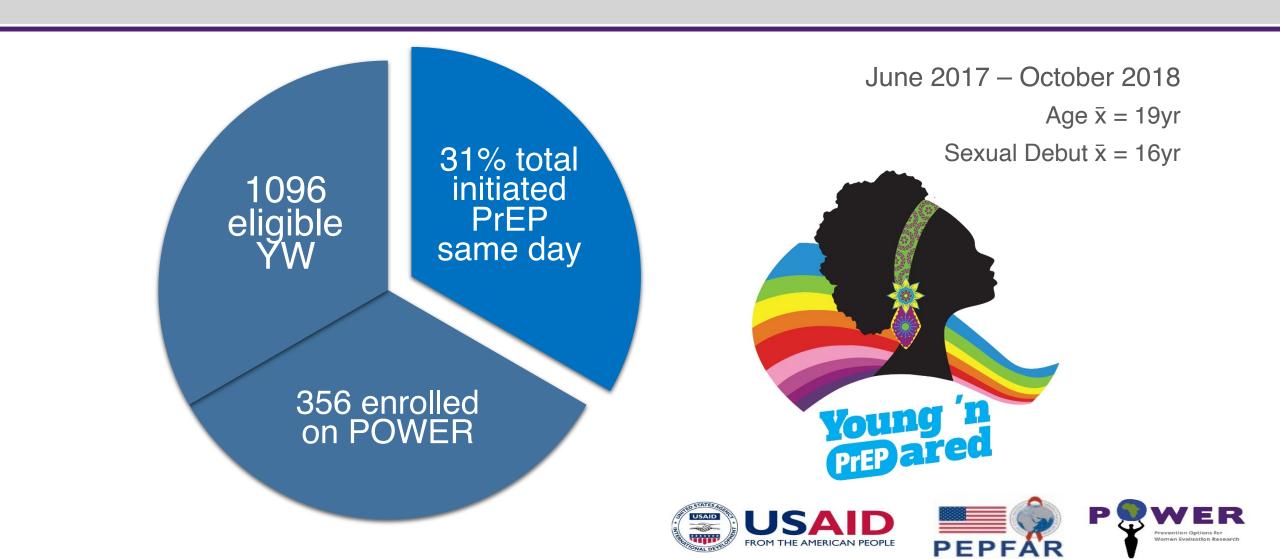

• Visit schedule

- Objective: To determine the persistence and patterns of oral PrEP use in African young women
- Persistence is calculated based on pharmacy records.
- Persistence is defined as uninterrupted PrEP use, based on PrEP dispensing at months with a visit or having
 previously dispensed supply of >30 days of PrEP at months without a visit.

PrEP uptake

Results: Participant Behavioral Data

Average number of HIV risk factors reported in AGYW lives = 3

73%	71%	Inconsistent Condom Use
70%	76%	Unknown partner HIV status
75%	63%	Partner has other partners
13%	9%	Multiple Partners
22%	13%	Reported STI in last 6 month*
Initiate PrEP	Decline PrEP	STUD STATES AND IN I I I I I I I I I I I I I I I I I

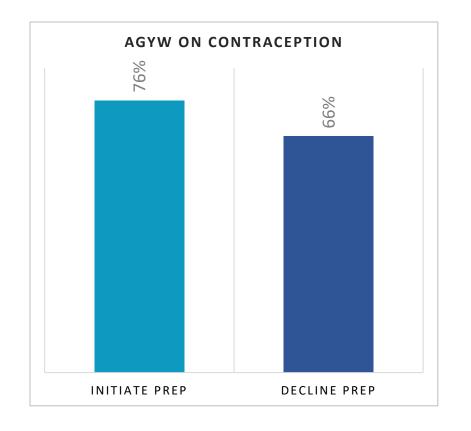

*Upon testing for STI in the PrEP accept group Chlamydia/Gonorrhea was found in 49% of this group

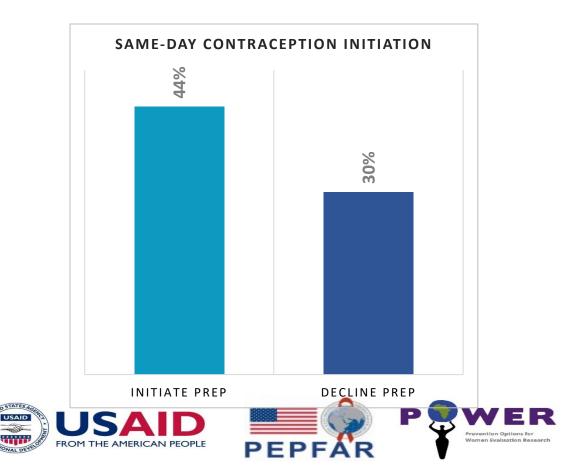

Uptake of PrEP and hormonal contraception

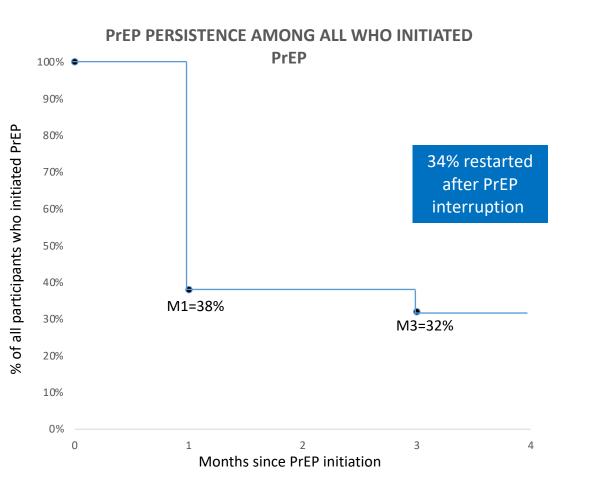

Young women using contraception were more likely to initiate PrEP on the same day (p=0.001)

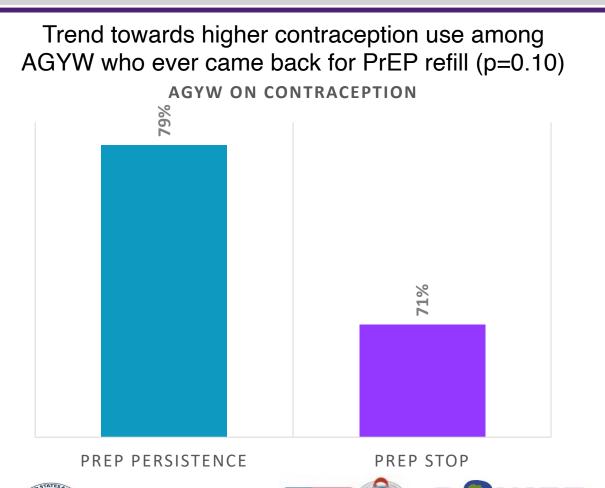

PrEP initiation was significantly associated with contraception initiation on the same day (p=0.003)

PrEP persistence and contraception use

Conclusion

- Contraception and PrEP initiation and continuation were correlated in this group of young African women.
- While young women's contraception use facilitated PrEP initiation and continuation, PrEP initiation also encouraged young women to initiate contraception use.
- These findings support the integration of SRHS with the provision of PrEP for African AGYW.
- PrEP and hormonal contraception delivery to adolescent girls and young women through a mobile clinic is feasible
